KisanVoice AI

Git Push & Pray

Hackathon Project Summary

Voice-First Agricultural Intelligence Platform for Indian Farmers

Built with ❤️ for 700 Million Indian Farmers

Team: Git Push & Pray | Status: Production Ready | Region: AWS ap-south-1

🏆 **Hackathon Theme**

Build an AI-powered solution that supports rural ecosystems, sustainability, or resource-efficient systems.

Executive Summary

The Challenge

70% of India's 1.4 billion people depend on agriculture. Yet farmers face crushing challenges: no access to expert agri-advice, unpredictable weather, water waste, unfair market prices, and difficulty booking farm services. Existing solutions are in English and require smartphone literacy — excluding hundreds of millions of farmers.

Our Solution

KisanVoice AI is a complete, production-deployed, voice-first agricultural intelligence platform that operates entirely in Hindi. Farmers simply speak their question — no typing, no English required — and receive AI-powered guidance on weather, crop health, irrigation, live market prices, and on-demand farm services via natural voice conversation.

The platform is not a prototype. It is a fully integrated system comprising:

- 📱 A 27-screen React Native mobile app (Android + iOS)
- 🌐 A web landing page and live admin analytics dashboard
- ☁️ 7 independent AWS serverless microservices deployed in production
- 🎤 End-to-end Hindi voice AI pipeline with sub-5 second response times
- 📲 SMS fallback for farmers on basic (non-smartphone) handsets

Hackathon Problem Statement

🏆 **Official Theme**

"Build an AI-powered solution that supports rural ecosystems, sustainability, or resource-efficient systems."

How KisanVoice AI Addresses Every Dimension

🌿 Rural Ecosystems	♻️ Sustainability	⚡ Resource Efficiency
– Voice-first Hindi interface eliminates the digital literacy barrier for 700M rural farmers	– FAO-56 irrigation science reduces water overuse by 30–40% – Weather-based spray advisory prevents	– Smart irrigation scheduling cuts water consumption per crop cycle

– SMS fallback ensures even basic phone users in remote villages are reached – ICAR-verified crop guidance in native language empowers farmers with expert knowledge	unnecessary pesticide use – AI crop guidance reduces failed harvests and chemical waste	– Live market prices help farmers sell at optimal time — reducing waste from distressed selling – Uber-style farm services marketplace maximises utilisation of tractors and equipment

The Scale of the Problem We Are Solving

🌾 **Agricultural GDP** Agriculture contributes ~18% of India's GDP yet receives minimal technology investment at the farmer level.	📉 **Farmer Income Crisis** Average farmer income is critically low — technology-driven advice can directly increase yields and incomes.
💧 **Water Scarcity** India uses 90% of its freshwater for agriculture. Inefficient irrigation is a national sustainability crisis.	🌡️ **Climate Vulnerability** Extreme weather events are increasing. Farmers lack real-time advisory to protect crops and livelihoods.
📵 **Digital Exclusion** Most agri-tech is English-only and requires high smartphone literacy, excluding 400M+ Hindi-speaking farmers.	🏪 **Market Exploitation** Without live price data, farmers sell to middlemen at 40–60% below mandi rates, losing crores annually.

🎯 **Our Answer to the Theme**

KisanVoice AI directly addresses all three pillars of the hackathon theme: it supports rural ecosystems by democratising expert agricultural knowledge in Hindi; it drives sustainability through FAO-56-based water conservation and pesticide reduction; and it maximises resource efficiency via smart irrigation scheduling, live market intelligence, and on-demand farm services utilisation.

Impact at a Glance

700M+	27	8	₹0.04
Farmers Targeted	Mobile Screens	Integrated Services	Cost per AI Query

30–40%	10–15%	<5s	15+

Water Savings	Yield Increase	AI Response Time	Live DynamoDB Tables

Problem Statement

Indian agriculture is critically underserved by technology. Despite constituting the backbone of the Indian economy, farmers face five systemic challenges:

🌦️ **Unpredictable Weather**	💧 **Water Wastage**
📊 **Unfair Market Prices**	🚜 **Lack of Farm Services**
🗣️ **English-only Digital Tools**	📵 **Smartphone Literacy Barrier**

Why KisanVoice AI is Different

Most agri-tech solutions are designed for urban, educated users. KisanVoice AI is designed from the ground up for the last mile: rural, Hindi-speaking farmers who may be illiterate and use basic phones. Our differentiation:

- ✅ 100% Voice-First — farmers interact through Hindi speech, not typing
- ✅ Works on basic phones — critical alerts delivered via Twilio SMS
- ✅ Scientific foundation — FAO-56 methodology for irrigation advice
- ✅ Cost-efficient — $0.0005 per AI query using AWS Bedrock free tier models
- ✅ Real production deployment — not a demo; live on AWS ap-south-1

Solution Architecture

KisanVoice AI is built on a serverless AWS microservices architecture. Each service is independently deployed and operates with its own DynamoDB tables, Lambda functions, and API Gateway endpoints. The Master Dashboard API aggregates data from all services for a unified admin view.

Core Components

Feature / Service	Technology	Impact
📱 Mobile App (React Native)	TypeScript, React Navigation, AWS Bedrock, Polly	27 screens; full offline support

🌐 Web Portal + Admin Dashboard	React 19, Vite 7, Tailwind CSS 4, React Router v7	Landing page + 6-tab live analytics
🔐 Login System	Twilio Verify OTP + JWT + DynamoDB	Secure 7-day sessions
🤖 Hindi AI Voice Agent	Meta Llama 3 8B via Bedrock + RAG + Tools	2–5s text, 7–15s voice queries
🌦️ Weather Advisory	OpenWeather API + Amazon Nova Lite	Pesticide spray safety in Hindi
💧 Irrigation Alert System	FAO-56 + Twilio SMS + EventBridge	30–40% water savings, 6 crop types
📊 Live Market Analyzer	data.gov.in API + Amazon Nova Micro	Real-time commodity price insights
🚜 Helping Hand (Farm Services)	Uber-style matching + Twilio SMS	Tractor, Labour, Transport on demand
📈 Master Dashboard API	Node.js 18 + 15+ DynamoDB tables	Cross-service analytics aggregation

Feature Deep-Dives

1. Hindi Voice AI Agent

The heart of the platform. Farmers tap a single button, speak their question in Hindi, and receive a spoken answer in seconds. The agent uses Meta Llama 3 8B on AWS Bedrock with a RAG knowledge base populated with ICAR-verified agricultural data. It supports YouTube video recommendations, web search, and maintains full conversation history per user in DynamoDB.

Performance

- Text queries: 2–5 seconds
- Voice queries: 7–15 seconds
- Cost: ~$0.0005 per query

Capabilities

- Hindi STT + TTS via AWS Polly
- RAG over ICAR knowledge base
- YouTube & web search tools

2. Smart Irrigation Alert System

Uses the internationally recognized FAO-56 evapotranspiration methodology to calculate precise daily water needs for 6 major crops (Wheat, Rice, Cotton, Sugarcane, Maize, Potato), each with 6 growth stages. The system monitors weather 24/7 and dispatches bilingual SMS alerts for heatwaves, frost, thunderstorms, and drought conditions.

Scientific Impact

> FAO-56 soil moisture modelling delivers 30–40% water savings and 10–15% yield increases — with tangible economic benefit for smallholder farmers.

3. Live Market Analyzer

Connects directly to the Government of India's data.gov.in API for real-time commodity prices across regional mandis. AWS Bedrock (Amazon Nova Micro) then analyzes price trends, generates buy/sell recommendations, and assesses market risk — all delivered in plain Hindi for farmers making selling decisions.

4. Uber-Style Helping Hand

An on-demand farm services marketplace modeled after Uber's dispatching logic. When a farmer requests a tractor, agricultural labor, or transport, the system identifies the top 3 nearest service providers and notifies them via SMS. Providers reply 'YES' to accept. The system uses atomic DynamoDB operations to prevent race conditions when multiple providers respond simultaneously.

5. Admin Analytics Dashboard

A live web dashboard at /admin aggregates real-time data from 15+ DynamoDB tables across all platform services. It features 6 dedicated analytics tabs — Overview, Voice AI, Helping Hand, Irrigation, Users, and Activity — giving operators a complete operational picture of platform health and usage.

Technology Stack

Layer	Technologies
Mobile	React Native (TypeScript), React Navigation, @react-native-voice/voice
Web Frontend	React 19, Vite 7, Tailwind CSS 4, React Router v7
AI / ML	AWS Bedrock (Claude 3.5 Sonnet, Llama 3 8B, Nova Lite/Micro), AWS Polly, AWS Transcribe
Backend	Node.js 18/20, Python 3.12, Serverless Framework, AWS SAM
Cloud Infrastructure	AWS Lambda, API Gateway, DynamoDB, S3, EventBridge, CloudWatch
Authentication	Twilio Verify (OTP) + JSON Web Tokens (7-day sessions)
Messaging / Alerts	Twilio SMS (bilingual Hindi + English alerts)

External Data	OpenWeather API (weather), data.gov.in API (market prices)
Analytics	Master Dashboard API — parallel Promise.all across 15+ DynamoDB tables

Irrigation Alert System — SMS Alerts

The KisanVoice Irrigation Alert System automatically sends 15 types of bilingual SMS messages (Hindi + English) via Twilio to registered farmers. Alerts are triggered by real-time soil moisture calculations, live weather monitoring, and scheduled EventBridge rules — requiring zero manual intervention.

15 SMS Alert Types

Category	Alert Types	Trigger
Daily Irrigation (4)	Irrigate, Skip, Recovery, Reassurance	Soil moisture below/above threshold — sent daily at 5:45 PM IST
Weather Alerts (7)	Heatwave, Frost, Thunderstorm, Heavy Rain, High Wind, Drought, Critical Monsoon	Real-time OpenWeather monitoring, 24/7 EventBridge trigger
Periodic (1)	Weekly Summary	Every Sunday — water saved, yield impact, upcoming forecast
System (3)	Registration, STOP, START	Farmer registration or SMS reply webhook

Sample SMS Messages Sent to Farmers

All messages are delivered in Hindi to ensure accessibility for rural farmers. Below are real examples of each alert category sent via Twilio to registered farmers.

💧 Daily Irrigation Alerts — Sent at 5:45 PM IST every day

Irrigate Alert किसानवॉइस: राजेश कुमार जी गेहूं - करनाल कल सुबह 6-8 बजे सिंचाई करें मिट्टी की नमी: 35% (कम है) पानी: 45mm	**Skip Irrigation Alert** किसानवॉइस: राजेश कुमार जी गेहूं - करनाल आज सिंचाई न करें मिट्टी की नमी: 72% (पर्याप्त है) अगली जांच: कल शाम

🌦️ Weather Alert Messages — Triggered 24/7 by OpenWeather API

Heatwave Warning किसानवॉइस: चेतावनी! करनाल - भीषण गर्मी तापमान: 45°C सुबह 6 बजे से पहले सिंचाई करें फसल को छाया दें	**Frost Warning** किसानवॉइस: पाला चेतावनी! करनाल - तापमान गिर रहा है रात: -2°C संभावित शाम को सिंचाई करें फसल को ढकें	**Heavy Rain Warning** किसानवॉइस: भारी बारिश! करनाल - 80mm बारिश अगले 24 घंटे में सिंचाई बंद करें जल निकासी सुनिश्चित करें
Thunderstorm Warning किसानवॉइस: तूफान चेतावनी! करनाल - बिजली का खतरा खेत से बाहर रहें बिजली के उपकरण बंद करें	**Drought Alert** किसानवॉइस: सूखे की चेतावनी करनाल - 21 दिन से बारिश नहीं पानी की बचत जरूरी ड्रिप सिंचाई अपनाएं	**Critical Monsoon** किसानवॉइस: मानसून अलर्ट! करनाल - अत्यधिक वर्षा 120mm+ अगले 6 घंटे खेत की नालियां साफ करें

📅 Periodic & System Messages

Weekly Summary(Every Sunday) किसानवॉइस: साप्ताहिक रिपोर्ट राजेश कुमार — गेहूं, करनाल इस सप्ताह पानी बचाया: 180L सिंचाई: 3 बार अगले सप्ताह: बारिश संभव	**Registration Confirmed** किसानवॉइस में आपका स्वागत है! राजेश कुमार जी फसल: गेहूं | जिला: करनाल अब आपको रोज शाम 5:45 बजे सिंचाई की सलाह मिलेगी	**STOP / START Webhook** STOP received: किसानवॉइस: अलर्ट बंद किए START received: किसानवॉइस: अलर्ट फिर शुरू Reply STOP to unsubscribe

Test Farmer Profiles

Farmer	Phone	Crop / District	Role
Rajesh Kumar	+91 99108 90180	Wheat / Karnal	Primary test farmer
Amit Singh	+91 93891 65491	Rice / Lucknow	Secondary test farmer

Helping Hand — SMS Flow

The Helping Hand farm services marketplace operates entirely via SMS, making it accessible to farmers on any phone. Every request triggers a chain of 3 automated Hindi SMS messages — connecting farmers with the nearest service provider in under 60 seconds.

3	5	~60s	$0.05
SMS per request	Total messages sent	Farmer to provider	Cost per request

SMS Flow — Complete User Journey

👨‍🌾 FARMER	⚙️ SYSTEM	🚜 PROVIDER (Top 3)
T+0s: Creates request POST /request with service type, location, urgency	**Matches top 3 providers** Ranked by rating + proximity. Sends SMS #1 simultaneously to all 3.	**Receives SMS #1** New job alert with farmer location and price. Replies YES to accept.
T+60s: Receives SMS #3 Gets provider name, rating, and phone number. Calls provider directly.	**Atomic acceptance** First YES wins. Sends SMS #2 to provider and SMS #3 to farmer simultaneously.	**T+30s: Replies YES** First provider to reply YES claims the job. Receives SMS #2 confirmation.

The 3 SMS Messages

SMS #1 — Provider Notification | Sent to: Top 3 Providers | Trigger: Farmer creates request

Message Format	Live Example
🚜 Helping Hand: नया {SERVICE_TYPE} अनुरोध! किसान: {farmer_name} स्थान: {farmer_pincode} कीमत: ₹{estimated_price} स्वीकार करने के लिए YES लिखें ID: {request_id_short}	🚜 Helping Hand: नया TRACTOR अनुरोध! किसान: राजेश शर्मा स्थान: 411001 कीमत: ₹500 स्वीकार करने के लिए YES लिखें ID: bc3c38fb

SMS #2 — Acceptance Confirmation | Sent to: Accepting Provider | Trigger: Provider replies YES

Message Format	Live Example
✅ Helping Hand: अनुरोध स्वीकृत! किसान: {farmer_name} फोन: {farmer_phone} स्थान: {farmer_pincode} कृपया किसान को कॉल करें ID: {request_id_short}	✅ Helping Hand: अनुरोध स्वीकृत! किसान: राजेश शर्मा फोन: +919910890180 स्थान: 411001 कृपया किसान को कॉल करें ID: bc3c38fb

SMS #3 — Provider Found | Sent to: Farmer | Trigger: Provider accepts (simultaneous with SMS #2)

Message Format	Live Example
✅ Helping Hand: प्रदाता मिल गया! नाम: {provider_name} रेटिंग: {rating}⭐	✅ Helping Hand: प्रदाता मिल गया! नाम: रमेश कुमार रेटिंग: 4.8⭐

फोन: {provider_phone} कृपया प्रदाता को कॉल करें ID: {request_id_short}	फोन: +919876543210 कृपया प्रदाता को कॉल करें ID: bc3c38fb

Why Each SMS Matters

SMS	Operational Purpose	Business Value
#1 Provider Notification	Instant job alert via SMS — reliable in rural areas with patchy data. Top 3 providers notified simultaneously for fastest response.	Reduces response time from hours to minutes. Fair first-come-first-served distribution rewards engaged providers.
#2 Provider Confirmation	Confirms provider has claimed the job. Provides farmer contact details so provider can coordinate logistics immediately.	Reduces no-shows. Creates accountability. Enables direct human coordination outside the app.
#3 Farmer Notification	Notifies farmer that a provider is on the way. Shows provider rating for trust and phone number for direct contact.	Eliminates farmer anxiety during wait. Builds platform trust through transparency. Completes the matching loop.

Planned Future SMS Messages

SMS #	Recipient	Purpose
#4	Farmer	Request creation confirmation — immediate acknowledgement that request is being processed
#5	Both	Service in-progress update — status tracking and service tips once provider arrives
#6	Farmer	Service completion prompt — triggers farmer to confirm completion and submit rating
#7	Farmer	Rating confirmation — thank-you message with next-use incentive after rating submitted
#8	Provider	Rating update — shows provider their new average rating to encourage quality service

Vision & Roadmap

KisanVoice AI is designed to scale to millions of farmers across India. The serverless AWS architecture automatically scales with demand — zero configuration required. Key upcoming enhancements include:

- 🔍 Camera-based pest identification using AWS Rekognition

- 🗣️ Regional language expansion (Tamil, Telugu, Marathi, Bengali)
- 🏛️ Integration with PM-KISAN government subsidy database
- 📴 Offline AI mode via edge-deployed lightweight models
- 🛡️ Crop insurance advisory based on weather risk profiles

> *"Every farmer deserves the same access to intelligence as a well-connected agricultural expert."*
